

Everything you need to monitor and accelerate the performance of Java applications – simple to install, use and buy.

4D Performance for Java applications

At Application Performance, we are passionate about performance!

With **4D Performance for Java** we've done our best to make end-to-end application performance monitoring as simple as possible. We looked at the most common performance challenges seen by our customers and brought together cutting edge technology to handle those challenges in an easy to deploy and use solution. We've even done our best to make **4D Performance for Java** easy to buy – it's available as a subscription, so you can simply purchase what you need when you need it.

- Challenge 1 End user experience monitoring** – for real users in real time, all the time
- Challenge 2 Website acceleration** – typically providing 40%+ faster page load times in just a few hours
- Challenge 3 Java application server monitoring and tuning** – for even the most stressed production, test and cloud environments
- Challenge 4 Database server monitoring and tuning** – instant monitoring and bottleneck detection

In short 4D Performance for Java helps take the pain out of delivering faster Java based applications, with tangible results seen within hours rather than weeks.

Available as a subscription – so just buy what you need when you need it.

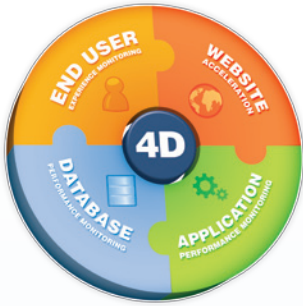

“We use two of the 4D products company wide as the foundation for our end-to-end application monitoring. The combination of AppDynamics for Java performance monitoring and DBTuna for Oracle, SQL Server, MySQL and NetApp, have dramatically reduced the time taken to find and fix performance problems, even in our most stressed production environments.”

Andrew Mulholland, Application Delivery and Support Manager, Betfair

4D APPLICATION PERFORMANCE

Accelerating, monitoring and optimising the performance of websites, applications and SharePoint

Buy one or more modules as you need them.

WEBSITE ACCELERATION

40% + faster websites and SharePoint applications in a matter of hours. No code changes or extra hardware – just happier end users

END USER PERFORMANCE

Measures the performance as seen by real end users of your websites, applications or SharePoint

JAVA, .NET AND CLOUD PERFORMANCE MONITORING

Measure performance and resolve bottlenecks for even the most complex business transactions

DATABASE PERFORMANCE

Instant monitoring and bottleneck detection for Oracle, SQL Server, MySQL, Sybase and NetApp

- Quick and easy to deploy – see benefits in a matter of hours
- Start with one module – expand to all four over time
- Available as a subscription – just buy what you need when you need it
