WebTuna - Web Performance Analytics

WebTuna is an enterprise performance monitoring and analytics solution for websites or intranet applications like Microsoft SharePoint.

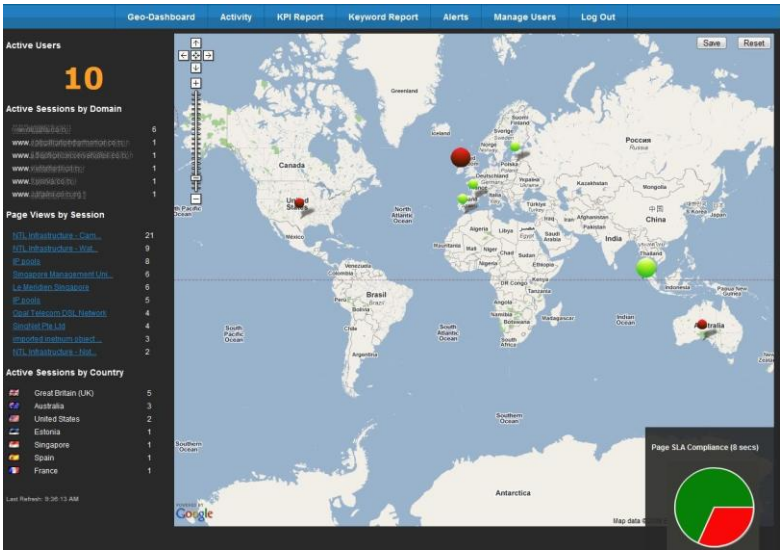
WebTuna lets you know exactly how each page on your website is performing for each individual user. It can be set up to measure performance against a pre-defined Service Level Agreement (SLA).

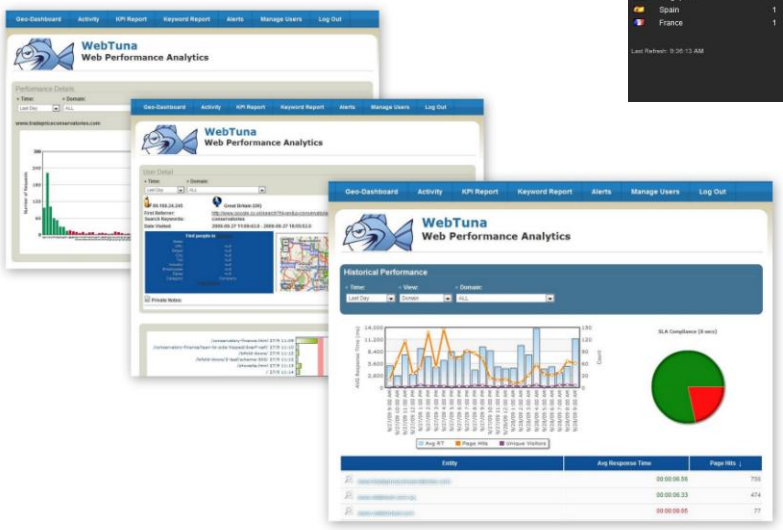
WebTuna's interface allows you to visualize web performance in a very powerful way. Reports can be broken down by user, country, URL, page title, domain, referrer and more.

Key Benefits

- Simple installation
  - Fully hosted solution
  - Just a 4K JavaScript file to add to your site
- Measures **real** end user experience for **all** visitors to your site (not synthetic transactions)
- Real-Time views as well as historical reports

*WebTuna's **GeoDashboard** allows real time visualization of how many users are on your sites and where they are coming from by overlaying them onto Google Maps. The size of bubble indicates number of users and the colour indicates the user experience they receiving.*





*Other views in WebTuna allow you to view **reports** on end user experience over time and **drill down** into individual users and the pages they visited.*
